SUMMARY

Versatile Software Engineer with a B.S. in Computer Science and experience in building scalable full-stack applications. Proficient in JavaScript TypeScript, React, [Node.js](#), PostgreSQL and MongoDB, with a focus on delivering data-driven solutions and performance optimization. Passionate about leveraging technology to improve user experiences, particularly within the intersection of fitness, data analytics, and high-performance web platforms.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript (ES6+), TypeScript, React, Node.js, Express.js, HTML5, CSS3, Tailwind CSS.

Databases & APIs: MongoDB, Mongoose, PostgreSQL, REST APIs.

Tools & Platforms: Git, GitHub, Vercel, Railway, Jira, Agile Development, Linux/Unix Shell.

EXPERIENCE

Web Developer | Unity Sports Club / Unity Event Hall | 2018–Present

- Engineered a venue rental application using modern JavaScript frameworks, improving rental conversion rates.
- Contributed to a 23% increase in weekly event attendance by engineering a data-driven registration funnel and optimizing lead-tracking integrations, directly supporting \$197,000 in revenue growth.

Software Developer 2016–2018 *MEDITECH*

- Developed and maintained healthcare software applications within an Agile environment, focusing on code quality and production stability in Meditech's proprietary coding language.
- Executed debugging, code reviews, and production fixes to ensure high availability for healthcare providers.

FEATURED PROJECTS

All Fours Tournament Manager | React, TypeScript, Supabase, PostgreSQL, Vite, Tailwind CSS

- Modernized and Refactored an existing tournament scoring application by replacing hardcoded data with a database-driven architecture using Supabase and PostgreSQL, enabling real-time management of teams, schedules, rankings, and statistics.
- Redesigned the user interface and user experience to make tournament administration intuitive for non-technical users while adding role-based access, responsive design, and CRM-style workflows for managing leagues and tournaments.

Hoop Recruit Recruiting Platform | React, Node.js, Express, MongoDB

- Built a full-stack mobile first recruiting platform for managing athlete rankings, player profiles, recruiting news, and statistical data.
- Developed REST APIs, MongoDB data models, CRUD functionality, and search features.
- Designed scalable architecture supporting authentication and content management capabilities.

EDUCATION

Framingham State University

Bachelor of Science, Computer Science 2016-2018

MassBay Community College

Associate of Science 2014-2016
